Connecting to the eduroam Network on MAC OS X

The following instructions apply to using eduroam wireless service on MAC OS X machines.

As long as your AirPort (WLAN) service is activated on your Mac, you can proceed with the steps below. If not, please start with Step 2 (How to Activate your AirPort (WLAN) Service) at the end of the document.

1. How to Connect to the Wireless Network

   - Click on the AirPort (WLAN) icon, located on your Menu Bar, in the upper right corner of your screen. In the appearing context menu choose “eduroam”

   ![Image of AirPort menu showing eduroam network]

   - On your first logon to the network you will be prompted to state your credentials

   - Enter your StudentID@the-klu.org as username and your password and acknowledge with “OK”
In this window proceed by clicking on “Continue" to verify the WLAN certificate

In this name / password prompt you have to state account information with administrative or at least installation rights for your machine. The same account you are using for installing applications for example

Continue by clicking “OK“
• Make sure that the klu wireless is properly connected by clicking on the AirPort (WLAN) icon again. In case everything has worked out there should be a check mark left to the network name.

2. How to Activate your AirPort (WLAN) Service

These steps do only apply to you if your AirPort (WLAN) service is deactivated.

• Go to your System Preferences. If there is no System Preferences icon inside your Application Dock use the Spotlight search in the upper right corner of your screen (the magnifying glass) to find it

• Click on “Network” - underneath Internet & Wireless

• Activate your AirPort service by clicking on “Turn Wi-Fi On”

• To logon to The KLU wireless, either choose the “eduroam” network from the Network Name dropdown menu or go back to Step 01 at the very beginning of the document
